

Senckenberg Gesellschaft für Naturforschung (SGN)

The Senckenberg Gesellschaft für Naturforschung conducts research in bio- and geoscience. Major research fields are biodiversity and ecosystem research and the research on the entire Earth-Human-Earth system. Senckenberg headquarters are located in Frankfurt am Main, but research on marine, terrestrial and climate systems is conducted at additional nine locations throughout Germany: In Dresden, Gelnhausen, Görlitz, Hamburg, Messel, Müncheberg, Tübingen, Weimar und Wilhelmshaven. In conjunction with the Goethe-Universität Frankfurt and other sectoral partners, SGN manages the Biodiversity and Climate Research Centre (BiK-F) in Frankfurt. SGN employs about 1000 people, c. 300 of which are scientists. Senckenberg scientists are active in projects worldwide, most of which are international collaborations with universities and other research institutions. SGN hosts biological and geological research collections with more than 35 million series. In their laboratories, Senckenberg scientists have access to the most modern methods and high-tech equipment. These include tomography, x-ray analysis, electron microscopy, 3D morphometry, DNA laboratories and research ships. Each year, some 600,000 visitors from all over the world visit the Senckenberg Natural History Museums in Frankfurt, Dresden and Görlitz. On 10,000 square metres, the Senckenberg museums apply the latest in educational research in order to communicate bioscience and research findings to a broad audience.
